UNDERSTANDING Pancreatic CANCER

What is Pancreatic Cancer?

The pancreas, located behind the stomach, produces substances for digestion and releases insulin to control blood sugar.

Pancreatic cancer starts when pancreatic cells grow uncontrollably.

Risk Factors

Family History

Race

Environmental

Tobacco Use

Diet

Diabetes

Older Age

Obesity

Pancreatitis

Statistics

African American individuals have the highest incidence rate of pancreatic cancer in the U.S.

Pancreatic cancer accounts for about 3% of all cancers in the U.S. and about 7% of all cancer deaths.

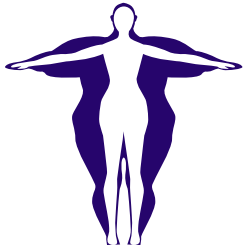

Positive Changes to make

Quit Smoking

Maintain a Healthy weight

Eat Fruits & Vegetables

Be physically active

Avoid Alcohol

Clinical Trials

Clinical trials test new treatments, and including more minority participants can lead to better and more effective treatments for those communities.

Find Clinical Trials at: clinicaltrials.gov

Ways to Advocate

Raise Awareness

Spread awareness through social media and by organizing or participating in community events and health campaigns.

Support Research Funding

Donate to or fundraise for organizations dedicated to pancreatic cancer research.

Advocate for Policy Changes

Join or support advocacy groups that focus on cancer-related policy changes.

Share Personal Stories

Sharing personal experiences with pancreatic cancer highlights the cause's importance.
